STEP 1: GETTING STARTED

Take note of all the different components of SATELLITE.

Position the bottom brace in the desired location. NOTE: The bottom brace has the adjustable feet on it.

To expand a Satellite infill set, hold it at points ‘A’ & ‘B’ as shown at left, then pull apart until it is able to fit onto the braces.

STEP 2: ATTACHING BOTTOM BRACE

Attach the first infill set to the bottom brace as shown. Push down until it clicks into place.
STEP 3: ATTACHING MIDDLE SCISSORS

Locate one of the middle scissors. Attach the middle scissors to the top of the Satellite infill set as shown here. Push down on each hub until they click into place.

STEP 4: ATTACHING EXPANDED INFILLS

Expand the next Satellite infill set as before. Attach this satellite infill set to the lower section as shown here.

Push down on the hub locations, as before, until they click into place to ensure all connections are secure.
STEP 5: ATTACHING TOP INFILLS

Expand the last Satellite infill set as before. Attach this satellite infill set to the lower section as shown here.

Push down on the hub locations, as before, until they click into place to ensure all connections are secure.

STEP 6: ATTACHING HUBS

Locate the top scissors. Attach it to the top of the Satellite infill set as shown here.

NOTE: The top scissors has the panel hangers on all four hubs.
STEP 7: ATTACHING PANELS

Locate one of the panels and attach the magnetic strips on the back of the panel to the magnetic strips on the satellite infill sets as shown here.

NOTE: For details on how to hang a panel correctly, refer to relevant details in the network instruction manual.

STEP 7: ATTACHING PANELS

Ensure the panels are hung straight to remove any ‘kinking’.

Locate the remaining panel and attach the magnetic strips on the back of the panel to the magnetic strips on the Satellite infill sets as shown here.
STEP 8: ATTACH FINAL PANEL

With the last panel in place, check to make sure the panels are hung straight and remove any ‘kinking’.
